

NAME

`archive_read_add_passphrase`, `archive_read_set_passphrase_callback` — functions for reading encrypted archives

LIBRARY

Streaming Archive Library (libarchive, -larchive)

SYNOPSIS

```
#include <archive.h>

int
archive_read_add_passphrase(struct archive *, const char *passphrase);

int
archive_read_set_passphrase_callback(struct archive *, void *client_data,
                                     archive_passphrase_callback *);
```

DESCRIPTION

`archive_read_add_passphrase()`

Register passphrases for reading an encryption archive. If *passphrase* is NULL or empty, this function will do nothing and `ARCHIVE_FAILED` will be returned. Otherwise, `ARCHIVE_OK` will be returned.

`archive_read_set_passphrase_callback()`

Register a callback function that will be invoked to get a passphrase for decryption after trying all the passphrases registered by the `archive_read_add_passphrase()` function failed.
